

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

None of them ! haha - kidding, i understand how to encapsulate into a function and return the data i want to receive, but struggling to adapt it to the book connect app

2. What parts of encapsulating your logic were hard?

All of it ! - keeping the rest of the app functions while encapsulating is quite the debugging task

3. Is abstracting the book preview a good or bad idea? Why?

Yes, i think all abstraction is a good idea to manage the complexity of an app, prevent bugs by breaking the code and eliminating small things that can go wrong
